

Medical Surgical Patient Pathophysiology of a Disease Process and Planning Table

Physiological and Psychological Changes of the Childbearing Patient

Understanding the Basis of Care of the Newborn

Using the information in the previous tools, answer the following questions:

What care will you plan related to the patient's level of growth and development?

What care will you provide related to the pathophysiology?

What care will you provide related to pharmacology?

What care will you provide related to the medical management of this patient?

What evidence-based nursing interventions will you plan into the patient's care?

Then, complete this Planning Table:

Nursing interventions Related to the above Questions	Expected outcomes from the nursing interventions for THIS patient

Grading Rubric for Planning Table

Performance Level	S	NI	U
Plans nursing interventions based on completed tools.	Identifies ≥ 5 nursing interventions based on completed tools.	Identifies 3-4 nursing interventions based on completed tools.	Identify less than 2 nursing interventions based on completed tools.
Analyzes data and derives expected outcomes based on individual patient data.	Develops ≥ 3 expected outcomes based on individual patient data.	Develops 1 or 2 expected outcomes based on individual patient data.	Unable to develop expected outcomes based on individual patient data.
