

1B & 1C - Course Student Learning Outcome #1, Competencies:

b. Apply medical/surgical nursing concepts to plan compassionate, patient-centered, evidence-based care taking individual differences including growth and developmental stages into consideration.

c. Monitor patient outcomes, including interpretation of assessment data and appropriate follow-up, to evaluate the effectiveness of nursing interventions for pediatric patients and patients with complex medical/surgical conditions.

Tool: Collecting data for patient centered care

Assignment: Students in all areas of care should review the patient’s chart. Review the patient’s history and related conditions.

Address the following with patient data:	Medical/Surgical	Pediatrics
Age of the patient		
Cultural background, beliefs, Socioeconomic status		
Approach to nursing care based on: Behaviors that are age and developmental level appropriate, those that are not		
Acute & Chronic conditions		
Extent of family involvement: who is present? How much involvement does that person have with the patient? Is that person close, distant, wanting to learn?		

Address the following with patient data:	Medical/Surgical	Pediatrics
Approach to teaching based on patient/family characteristics		
How will you individualize the care for your patient based on this data?		
Compare and contrast the care of similar cases. What was done the same? What was done differently and why?		
Type of medical insurance, any limitations related to medical insurance		

Rubric for Collecting Data for Patient-Centered Care with the RN in Medical/Surgical Rotation

Performance Level	S	NI	U
Compare and contrast care of similar cases	Able to compare and contrast care of similar cases	Able to correctly compare and contrast care of similar cases with some of the information, but not all information.	Unable to compare and contrast care of similar cases

Rubric for Collecting Data for Patient-Centered Care with the RN in Pediatric/Rotation

Performance Level	S	NI	U
Compare and contrast care of similar cases	Able to compare and contrast care of similar cases	Able to correctly compare and contrast care of similar cases with some of the information, but not all information.	Unable to compare and contrast care of similar cases
